

Lecture Notes

Welcome to the **Lecture Notes**. This directory contains a collection of markdown files designed to guide you through various Python topics. Each file is structured to provide both theoretical knowledge and practical examples.

Contents

- [Python01-py101.md](#)
Introduction to Python programming, covering basic syntax, variables, data types, and control structures.
- [Python02-Arrays.md](#)
Explores arrays in Python, focusing on operations with lists and other sequence data types.
- [Python03-Pandas.md](#)
A comprehensive guide to the Pandas library, including data manipulation, DataFrames, and Series.
- [Python04-Plotting.md](#)
A walkthrough on data visualization in Python, likely using libraries such as Matplotlib or Seaborn.
- [PythonE-Datascience.md](#)
An overview of data science concepts in Python, including data analysis, machine learning, and statistical techniques.
- [PythonE-GUI.md](#)
Discusses how to create graphical user interfaces (GUIs) in Python, possibly using Tkinter or PyQt.
- [PythonE-Numpy.md](#)
Focuses on the Numpy library, detailing numerical operations, array manipulation, and mathematical functions.
- [PythonE-Path and Filehandling.md](#)
Covers file handling in Python, including reading, writing, and manipulating files and directories.
- [GIT](#)
An introduction to Git, explaining version control, repositories, and basic commands.
